Operators Training for Aseptic Sterilizers

Indirect-UHT track

Liquid Consulting

Course flyer

This course helps attendees understand how an aseptic UHT sterilizer is designed and how it works, and gives them the information they need to begin operating the module in production. It also covers the technical documentation and the functional description of the module.

WHO SHOULD ATTEND

Attendees

- New operators, maintenance staff and supervisors who will operate the module, and existing staff who have not had this theoretical training before.

Prerequisites

A basic technical understanding of the equipment. Experience from any kind of dairy operation is beneficial.

Duration and languages

Three-day agenda. English and Spanish.

Request training

Use the form on liquidconsulting.com/training/operators-aseptic-sterilizers/ or write to automation@liquidconsulting.com.

MODULES

Day 1

- Introduction to the module (direct UHT)
- Flowchart reading
- Components overview
- Instruments overview

Day 2

- Functional-step description
- Technical-manual introduction
- Operational-manual introduction

Day 3

- Cleaning in place (CIP)
- Preventive maintenance
- Production protocols
- Questionnaire

LEARNING OUTCOMES

After the course, attendees should understand how the module is designed and how it works, and be ready to start operating it in production, with reference to the technical documentation and functional description.
